

Be a part of the first Hamilton County Virtual Robotics and Minecraft Summer Club!

Challenger Learning Center seeks 20 middle school students to explore hands-on and virtual robotics the weeks of Jun 8-11 and explore the science of Minecraft Jun 15-18. Each two-hour session will include a Zoom presentation and Camp Challenger educators to facilitate the experience.

You will be able to have the Dash robot and iPad for the two-week period that will be delivered to you no later than Jun 5 and will be picked up the week of Jun 21.

Participate in a variety of coding challenges, including designing your own maze, testing your coding skills with sports games, drawing and making your own designs, and creating your own Dash creature. Create Pixels, tessellations, gumdrop atoms and explore deforestation in the Minecraft app. It will be an experience you won't want to miss!
